

Science becomes
reality

Modellbasierte Simulation und Optimierung eines mehrachsigen Antriebsstranges

Arnold Hießl

Agenda

1. Introduction
2. Measurements
3. Simulation & Optimization

Agenda

1. Introduction
2. Measurements
3. Simulation & Optimization

Introduction

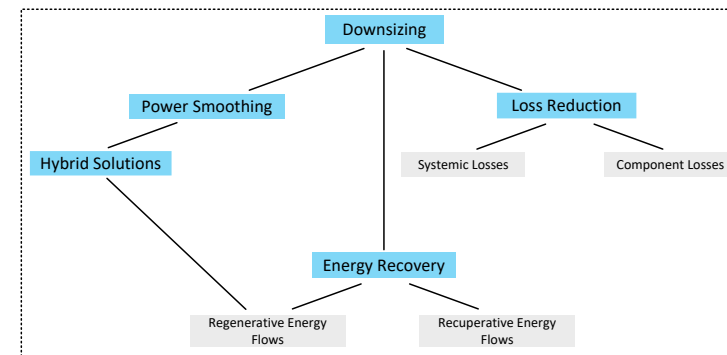

- Hybrid Drives

- At least two or more energy sources
- Smoothing – Boosting – Recuperating

- Compact Excavator

- 0.6 – 10 Tons
- Dozer Blade
- Boom Swing

- Downsizing

Agenda

1. Introduction
2. Measurements
3. Simulation & Optimization

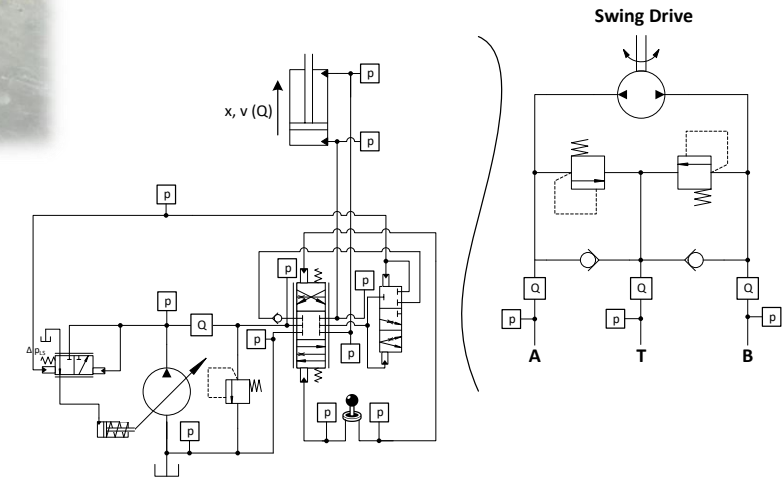

Measurements

- Power Digging
 - Fulfilment of a certain task as fast as possible
 - No Standstills
- Repro (reproducibility) Digging
 - Similar Cycles
 - Basis for statistical analysis
- Single Movements
 - Parameter identification

Measurements

- Primary Aim of Measurements
 - Evaluation of Recovery Potentials
 - Consideration of Losses
 - Information about System Design
- Data Acquisition
 - Special designed signal boxes
 - Over 50 gauges
 - Mobile acquisition system (National Instruments)
 - Additional Video recording
- Data Analysis with MATLAB

Measurements Analysis

Power Curve of an Actuator

$$P_{\text{pos}} = \underbrace{p_A \cdot Q_A - p_B \cdot Q_B}_P \cdot \frac{1}{2} \cdot 1 + \text{sign } P$$

$$P_{\text{neg}} = \underbrace{p_A \cdot Q_A - p_B \cdot Q_B}_P \cdot \frac{1}{2} \cdot 1 + \text{sign } -P$$

Measurements Analysis

- Evaluation of the maximum recovery degree

- Relative degree of recovery (RRD)

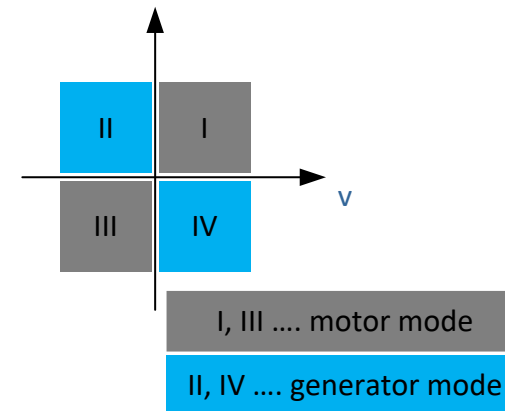

Ratio between mean output and mean input energy

$$\text{RRD} = \frac{\int_0^T P_{\text{neg}} dt}{\int_0^T P_{\text{pos}} dt}$$

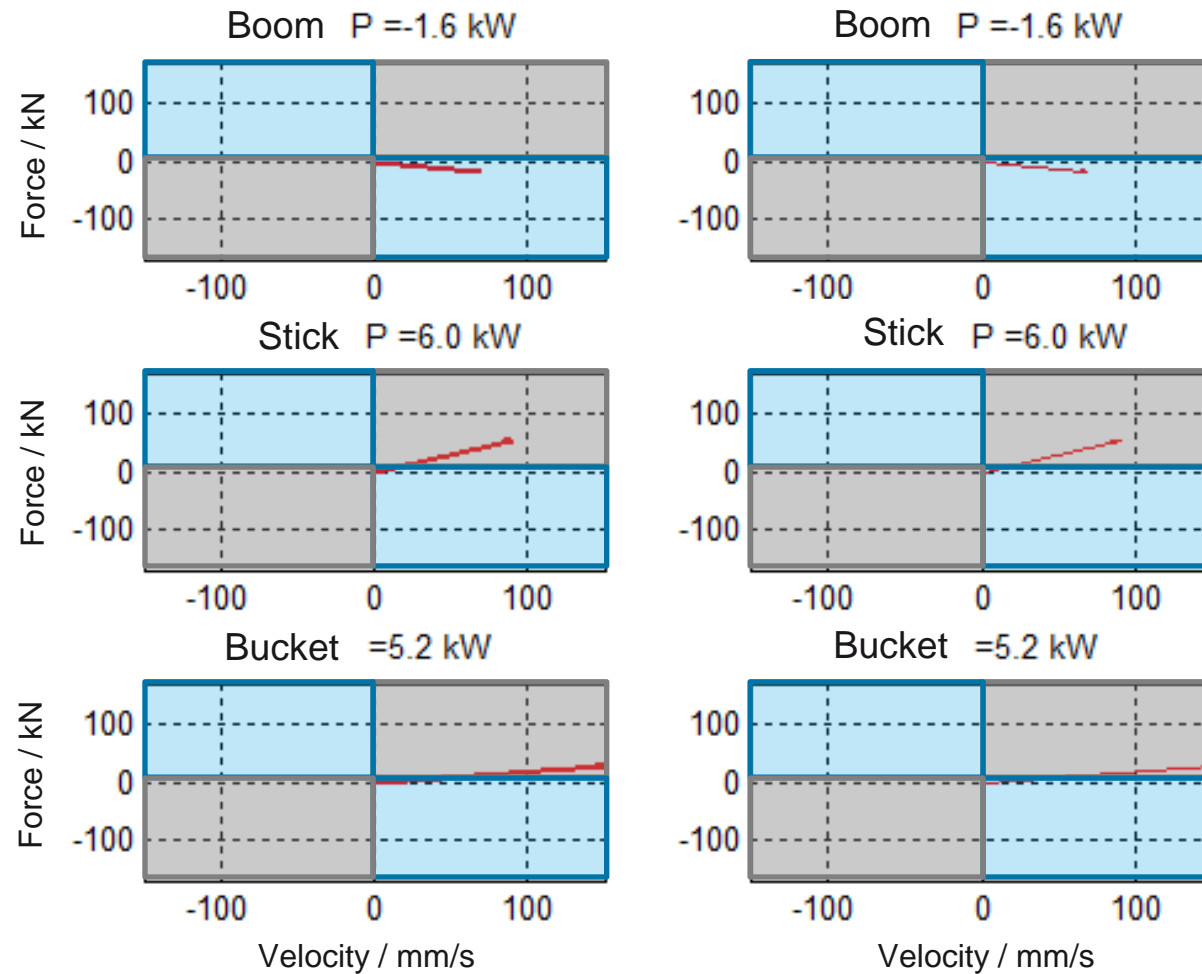

- Absolute degree of recovery (ARD)

Ratio between output energy and the hydraulic mean input (all pumps)

$$\text{ARD} = \frac{\int_0^T P_{\text{neg}} dt}{\sum_{i=1}^n \int_0^T P_{\text{pump}-i} dt}$$

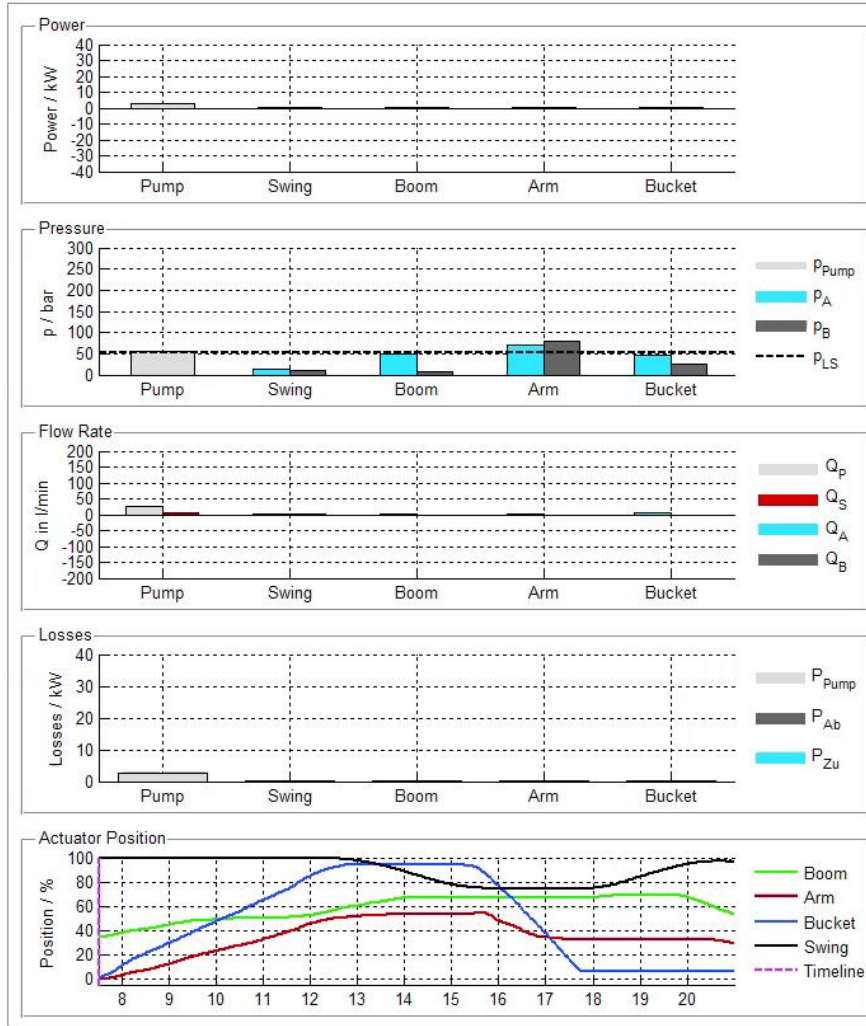

Measurements Analysis

Measurements Analysis

Repro Digging 90°

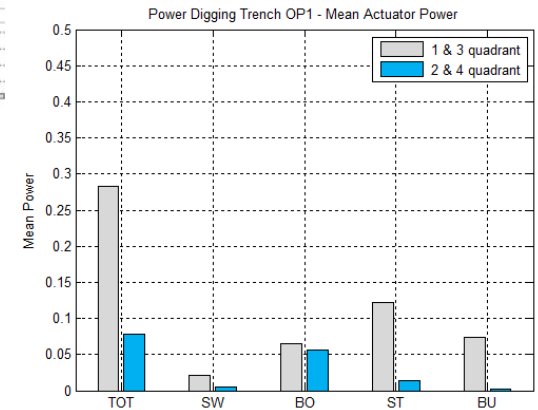

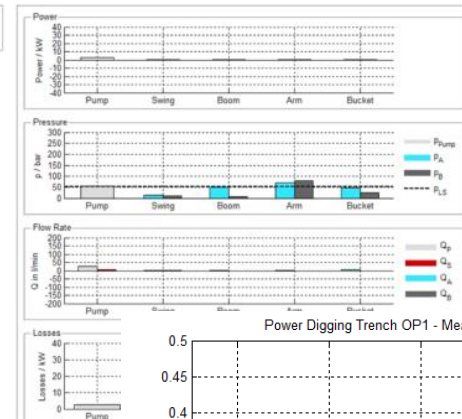

Measurements

- Data Analysis was done with MATLAB

- Data Preprocessing
- Data Evaluation
- Data Postprocessing

- Figures
- Videos

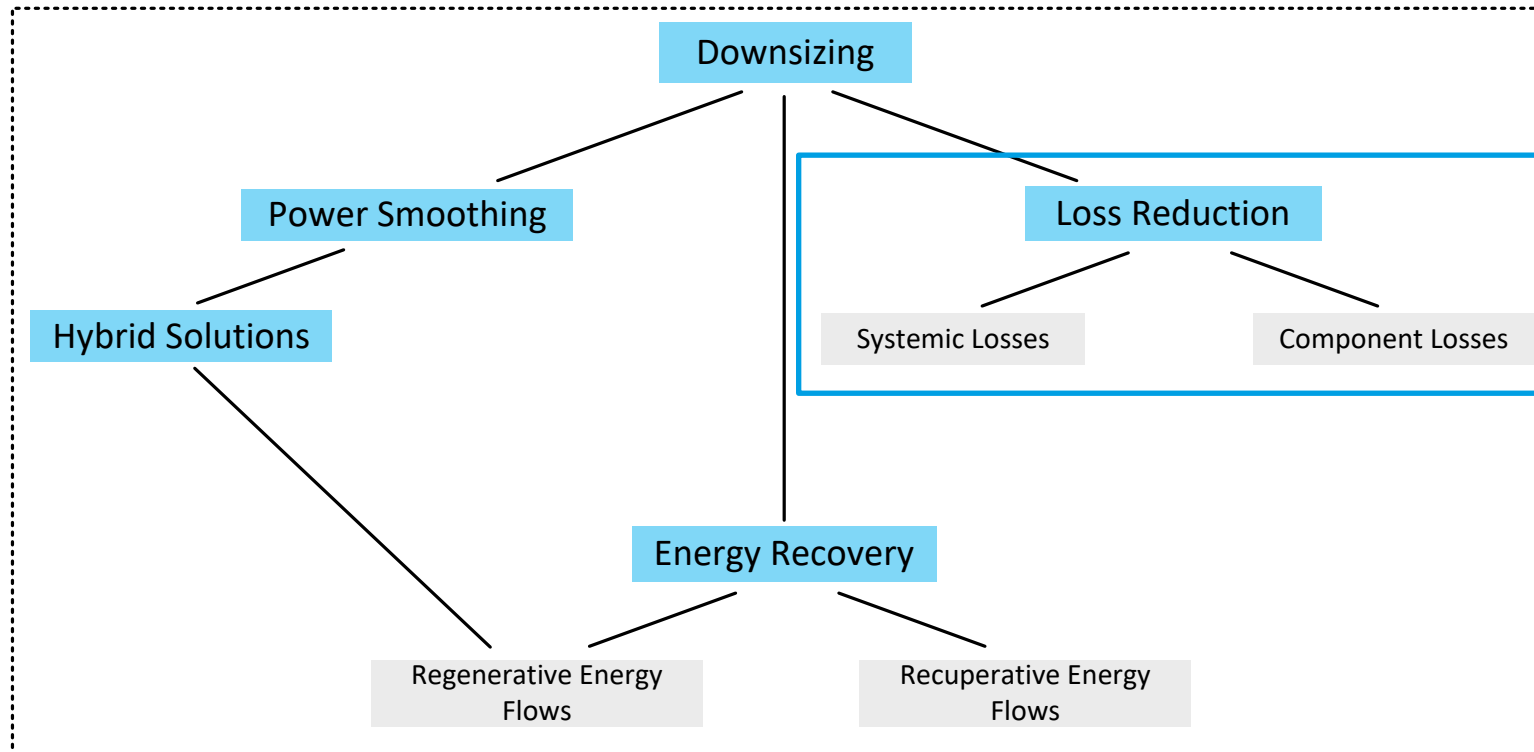

Agenda

1. Introduction
2. Measurements
3. Simulation & Optimization

Simulation & Optimization

Simulation & Optimization

Component & Systemic Losses

- Multi Circuit Systems

- Matrix and vector manipulation

- Entire Excavator Model (Simscape Fluids & Multibody)

- Mechanical Multi-Body System
- Hydraulic Model
- Digging Force Model

- Pressure Level Adaption

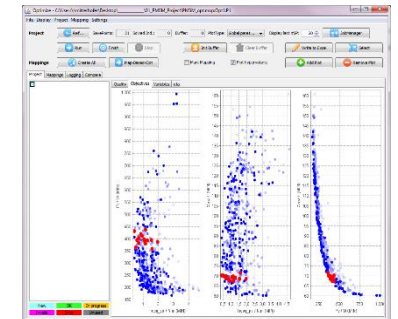

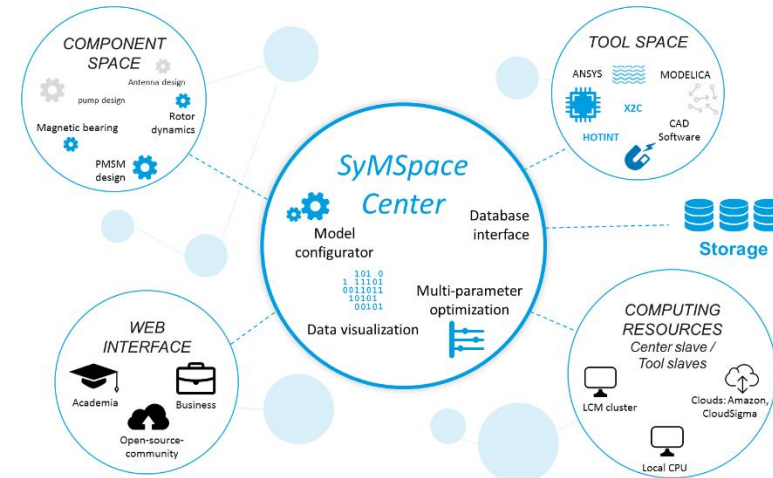

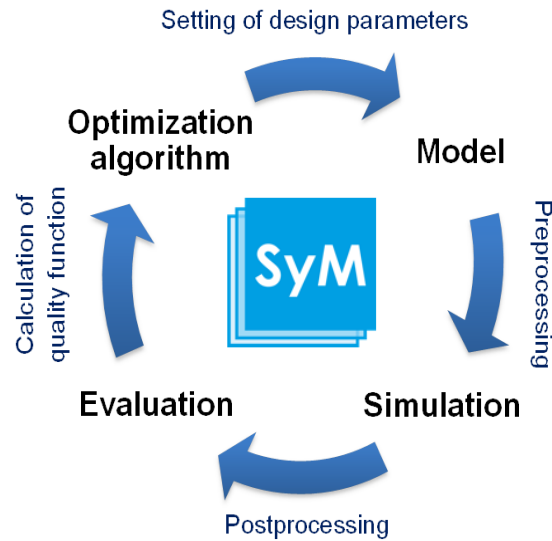

- Actuator Size
- Mechanical Geometry Change

	BO A	BO B	ST A	ST B	BU A	BU B	SW A	SW B
1	1	1	1	1	1	1	1	1
2	1	1	1	1	1	1	2	2
3	1	1	1	1	2	2	1	1
4	1	1	1	1	2	2	2	2
5	1	1	2	2	1	1	1	1
6	1	1	2	2	1	1	2	2
7	1	1	2	2	2	2	1	1
8	1	1	2	2	2	2	2	2

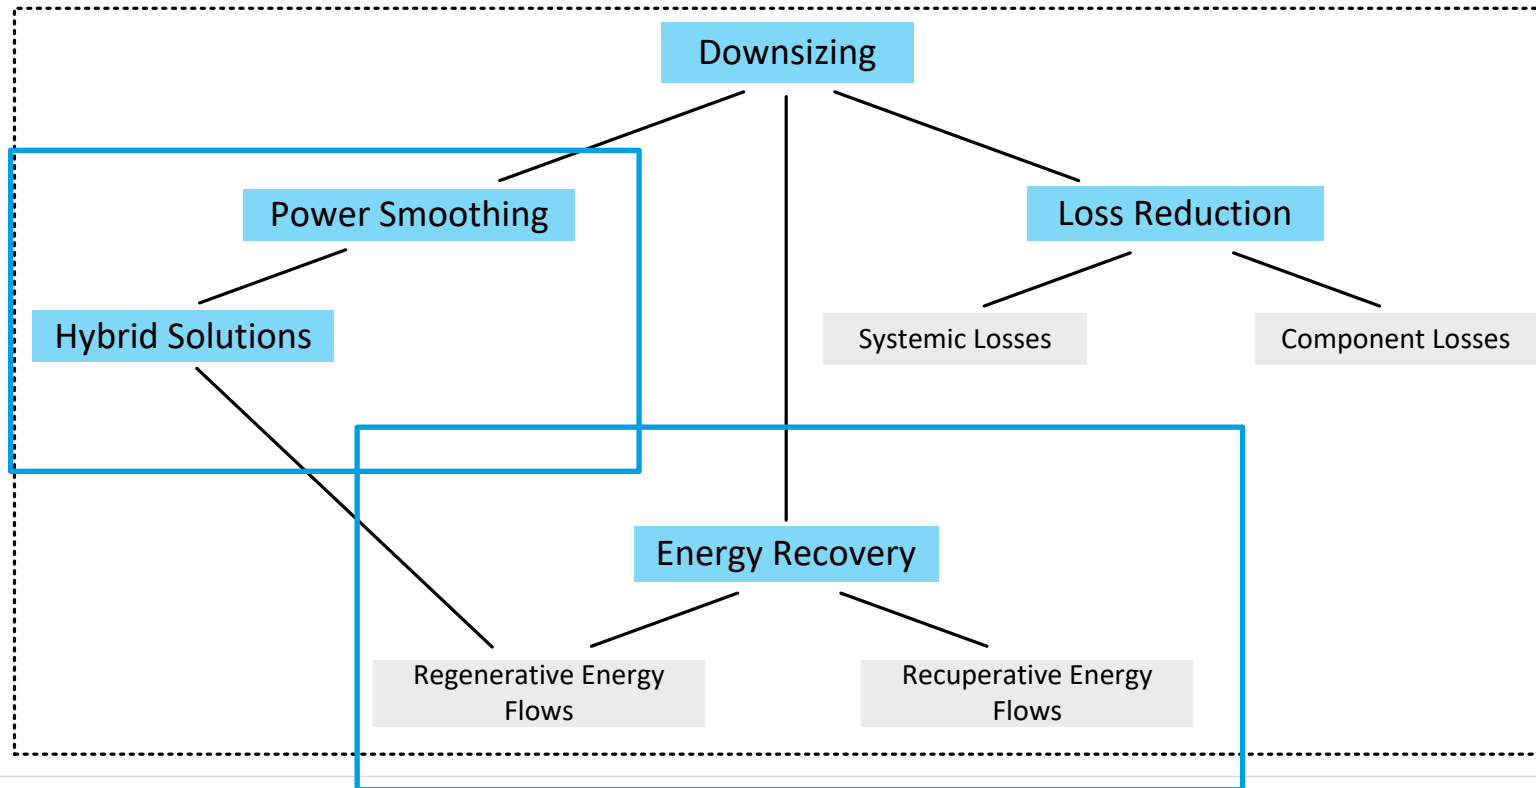

Simulation & Optimization

SyMSpace

- Evolutionary Optimization Algorithm
 - Multi Domain Tool
 - Multi Criteria Optimization

Simulation & Optimization

Simulation & Optimization

Hybrid Solutions & Energy Recovery Systems

- Classic Parallel Hydraulic Hybrid System

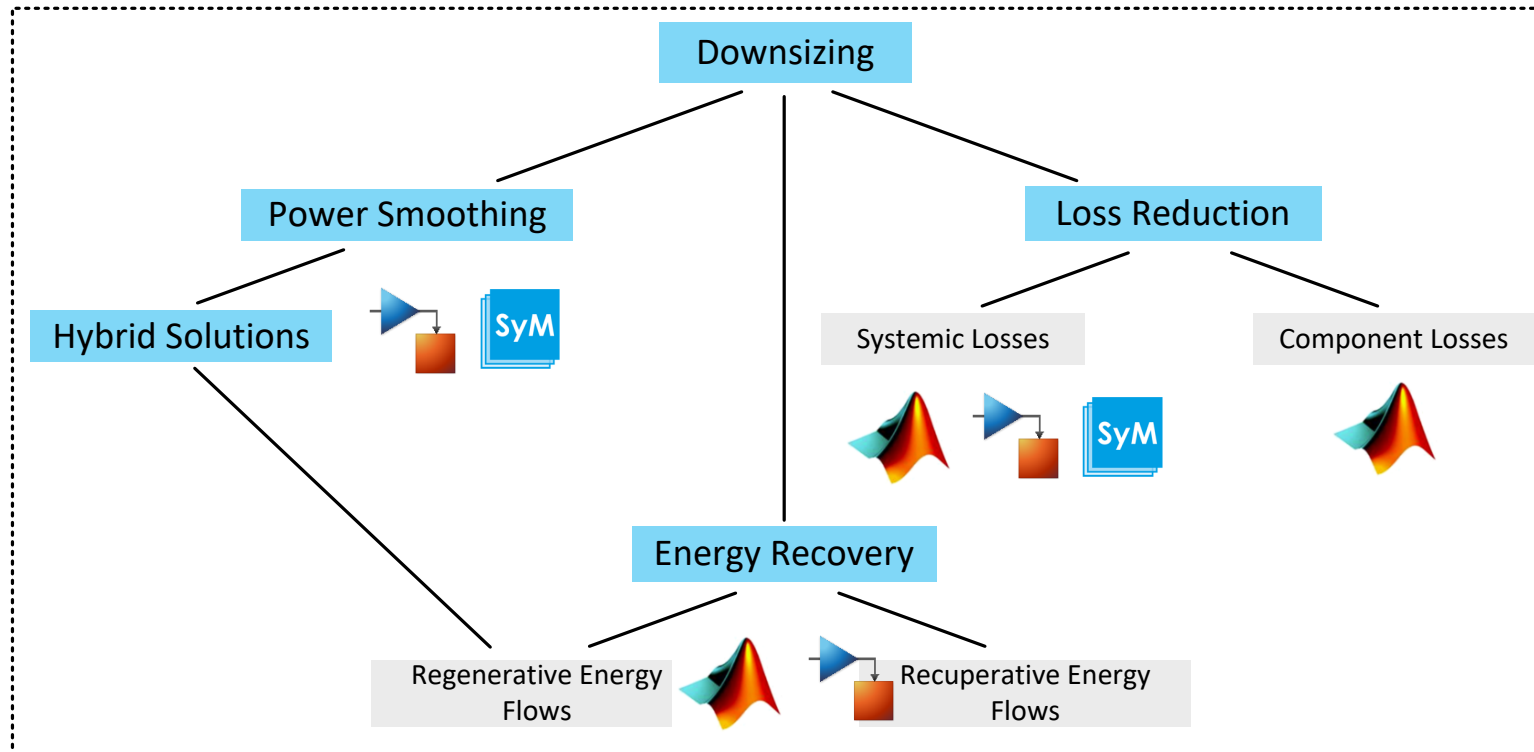

- Design & Optimization

- Energy Recovery System

Conclusion
